Tender no. BL/LI/TCW-MUM/21-22/ 58 Dt. 03/06/2021

- a. With a wire brush, clean the crack. Sweep away any loose debris, then vacuum the crack. If grease, oil, or dirt remains in or near the crack, clean it thoroughly.
- b. With a cold chisel and large hammer, undercut the edges of the crack. This will help hold the patch in place. Be sure to wear eye protection.
- c. With a small paintbrush, coat the crack surface with concrete bonding adhesive. Allow the adhesive to dry completely.
- d. Mix a suitable amount of sand mix with water as instructed on the bag. (Sand mix is one variety of dried concrete products sold in bags.)
- e. With a trowel, fill the crack thoroughly with the mixture. Smooth and level the surface.
- f. Allow the patch to cure undisturbed as instructed on the bag.

6. **Crack Filling in Brick Walls**

- a. Drill Into the Plaster
  - i. Using a 3/16-inch masonry bit, drill a hole in the plaster about 2 inches from the crack. When you hit lath, stop—the bit won't go through wood—pull out the bit, and drill another hole about 3 inches from the first and about 2 inches from the crack. Try to hit a strip of lath with every hole you drill. If you miss, the bit will sink in right to the chuck.
  - ii. Mark such holes with a pencil as a reminder not to inject them with primer or adhesive in the next steps; try drilling again about half an inch up or down.
  - iii. Continue until there is a series of holes about 4 inches apart on both sides of the crack. Vacuum the plaster crumbs out of all the holes.
- b. Prime and Seal
  - i. Put on safety goggles and disposable gloves, then spray-pump a stream of the acrylic conditioner into each of the holes (but not into any you've marked). One or two squeezes should be enough.
  - ii. Spray the edges of the crack, too, and clean up drips with a wet sponge. Wait 10 minutes for the milk-thin conditioner to soak into the plaster and wood.
- c. Inject the Adhesives
  - i. Place the adhesive tube's nozzle in one of the primed holes. Gently squeeze the caulking-gun trigger until the creamy glue fills the hole and a little backs out around the nozzle.
  - ii. Do the same for all unmarked holes. Scrape off the excess and wipe the wall clean with a wet sponge.

**Tender no. BL/LI/TCW-MUM/21-22/ 58 Dt. 03/06/2021**

d. Clamp the Wall

- i. Slip a 2-inch plastic washer over a 1 5/8-inch drywall screw, and drive it into the lath through one of the adhesive-filled holes. The screw pulls the lath against the plaster's back side while the washer gives the screwhead a wide clamping surface.
- ii. Plant washers about 8 to 12 inches apart on both sides of the crack.

e. Wipe and Wait

- i. Wipe away any excess adhesive with a wet sponge.
- ii. Wait a day or two for it to cure, then back out the screws and scrape off the washers. (Save them for another plaster-repair project.) Also, scrape off any dried adhesive poking out of the holes.

f. Fill the crack

- i. Mix up a small batch of setting-type joint compound and use it to fill the crack and all the holes. Smooth the wet compound with a trowel; then, as it begins to harden, wet it and smooth it again.
- ii. After the compound sets, sand the area lightly, then prime and paint.
